A professor at RIT requires her students to purchase an electronic device that students must use when taking her machine-scorable exams. Students enter exam answers into this personal electronic device and then send the answers via infrared signal to the instructor’s computer in the classroom. Once all the answers are received from every student taking the exam, the instructor’s computer immediately grades all of the exams and sends the students’ scores back to their devices.

Pro Group: You are a student in this Professor’s class who likes this method of taking and grading exams.

Con Group: You are a student in this Professor’s class who does not like this method of taking and grading exams.

Jury Group: You are the chairperson of this Professor’s department, considering the concerns of both groups of students (Pros and Cons), and must decide whether or not to allow this Professor to continue this method of exam taking and grading.
