

The diagram illustrates a complex chemical structure with the following components and connections:

- Top Left:** A methyl group (H₃₁-C₁) connected to a central carbon atom via a single bond.
- Central Region:** A network of atoms including oxygen (O₁-H₂), sulfur (S₁), and nitrogen (N₁, N₂, N₃). The sulfur atom is part of a five-membered ring. Nitrogen atoms are part of a six-membered ring and a five-membered ring.
- Right Side:** A side chain consisting of a methyl group (H₃₂-C₂) connected to a carbon atom (C₃-H₄₃), which is further connected to a nitrogen atom (N₃).
- Bottom:** A series of carbon and hydrogen atoms forming a chain-like structure at the base of the molecule.

All connections are labeled as "Single" bonds.
