

The graph represents a complex chemical structure with the following atoms and connections:

- Atoms:** C (Carbon), H (Hydrogen), O (Oxygen), N (Nitrogen), S (Sulfur), F (Fluorine).
- Connections:** All connections are labeled "Single", indicating single bonds.
- Key Features:**
  - The graph is highly branched and contains several cycles.
  - Atoms are labeled with subscripts (e.g., C\_1, H\_2, O\_3) to indicate their position in the molecule.
  - The structure includes a central core with multiple peripheral groups.
