

The diagram shows a complex chemical graph structure. The nodes are labeled with chemical symbols and indices, and the edges are labeled 'Single', indicating single bonds. The structure includes a central ring system with various substituents. Key features include:

- A long chain of 'Single' labels at the top left, connected to a 'Single' node.
- A 'H\_1' node connected to an 'N\_1' node.
- An 'O\_1' node connected to a 'Single' node.
- A 'C\_1-I\_1' group on the right side.
- Multiple 'Single' labels throughout the structure, representing the bonds between atoms.
