

The chemical structure is 1-(4-(propylamino)phenyl)-3-(2-oxo-2-phenylpropan-1-yl)sulfonamide. It features a central benzene ring substituted with a propylamino group (-NHCH₂CH₂CH₃) at the para position and a sulfonamide group (-SO₂NH-) at the other para position. The sulfonamide nitrogen is connected to a propanone chain (-CH₂-C(=O)-NH-), which is further connected to a phenyl ring.
