

The chemical structure is 1-(2-chloro-4-(chloromethyl)phenyl)-3-methyl-2-pyrrolidinone. It features a five-membered pyrrolidinone ring (blue and red) with a methyl group (green) on the nitrogen (N1) and a carbonyl group (C=O, red) at the 2-position. The 1-position of the pyrrolidinone ring is connected to a benzene ring (black). The benzene ring has a chlorine atom (green) at the 2-position and a chloromethyl group (-CH2Cl, green and red) at the 4-position. The structure is drawn with a color-coded scheme: the pyrrolidinone ring is blue and red, the methyl group is green, the carbonyl group is red, the benzene ring is black, the chlorine atom is green, and the chloromethyl group is green and red.
