

The image displays a complex organic molecule, likely a derivative of a nucleoside or a similar heterocyclic compound. The structure features a central pyrimidine-like ring system. The left ring is substituted with a methyl group (CH₃) and a hydroxyl group (OH). The right ring is substituted with a methyl group (CH₃) and a hydroxyl group (OH). The central ring is connected to a side chain that includes a methyl group (CH₃) and a hydroxyl group (OH). The molecule is rendered with various colored bonds and atoms to highlight specific structural features.
