

Chemical structure of a complex organic molecule, likely a pharmaceutical intermediate. The structure features a central benzene ring substituted with a 4-iodophenyl group, a 4-(2-phenyl-1H-imidazol-5-yl)phenyl group, and a 4-(2-phenyl-1H-imidazol-5-yl)phenyl group. The molecule is drawn in a skeletal format with carbon atoms as vertices and bonds as lines. The iodine atom is labeled 'I', and the nitrogen atoms in the imidazole rings are labeled 'N'. The central benzene ring is labeled 'C' at each vertex.
