

The chemical structure shows a central pyrrole ring. At the 2-position of the pyrrole, there is an ethoxy group (-OCH₂CH₂-) which is connected to a 4-fluorophenyl ring. At the 4-position of the pyrrole, there is a 4-chlorophenyl ring. The fluorine atom is at the para position of the left phenyl ring, and the chlorine atom is at the para position of the right phenyl ring. The pyrrole ring is oriented with its nitrogen atom at the bottom right.
