

The diagram shows a complex organic molecule with multiple fused and linked rings. Key features include:

- A central benzene ring substituted with a bromine atom (Br) at the top position.
- A side chain containing a carbonyl group (C=O) and a methylene group (-CH₂-).
- A fluorinated phenyl group attached via an amide linkage (-NH-).
- A piperidine ring connected to another phenyl group.
- Various other substituents including chlorine (Cl), oxygen (O), and nitrogen (N) atoms.

The structure is drawn with standard chemical notation, showing bonds between atoms and lone pairs where applicable.
