

The chemical structure is 1-(2,4-dichlorophenoxy)-2-(4-hydroxyphenyl)-N-(2-phenylpropyl)ethanamine. It features a central nitrogen atom bonded to three groups: a 2-phenylpropyl group (a benzene ring attached to a CH2-CH2-CH3 chain), a 4-hydroxyphenyl group (a benzene ring with a para-hydroxyl group), and a 2-(2,4-dichlorophenoxy)ethyl group (a two-carbon chain with an ether linkage to a benzene ring substituted with chlorine atoms at the 2 and 4 positions). The structure is rendered with multi-colored lines for each bond and atom labels.
