

The chemical structure is a complex molecule featuring several fused and linked rings. On the left, there is a benzimidazole-like system with a methyl group (H₃C) attached to one of the nitrogen atoms. This system is connected via a carbonyl group to a piperazine ring. The piperazine ring is further connected to another carbonyl group, which is linked to a benzothiazine-like system. The structure is color-coded with various colors for different atoms and bonds, including blue, red, green, yellow, and black.
