

The chemical structure is a complex organic molecule. It features a central five-membered ring containing two nitrogen atoms and a sulfur atom. One nitrogen is bonded to a phenyl ring and a carbonyl group. The other nitrogen is bonded to a phenyl ring and a thioether group. The sulfur atom is double-bonded to a carbon atom. This carbon atom is also bonded to a carbonyl group and a hydroxyl group. The carbonyl group is further bonded to a phenyl ring. The hydroxyl group is also bonded to a phenyl ring. The overall structure is a derivative of a thiazolidine ring system.
