

The image shows the chemical structure of 2-aminobenzonitrile (anthranil) with a benzene ring attached to the 2-position. The structure consists of a central benzene ring. At the 1-position, there is a nitrile group (-C≡N). At the 2-position, there is an amino group (-NH<sub>2</sub>). At the 3-position, there is a phenyl group (-C<sub>6</sub>H<sub>5</sub>). The structure is drawn with a central benzene ring, a nitrile group at the top, an amino group at the bottom, and a phenyl group at the right. The atoms are labeled with their respective symbols: N for nitrogen, C for carbon, H for hydrogen, and O for oxygen. The bonds are represented by lines of varying thickness and color (green, blue, red, orange, yellow, purple, brown, grey).
