

The chemical structure shows a central carbon atom double-bonded to an oxygen atom (top) and single-bonded to a hydroxyl group (left). This central carbon is also single-bonded to a phenyl ring (bottom) and a carboxylic acid group (right). The carboxylic acid group consists of a carbon atom double-bonded to an oxygen atom (top) and single-bonded to a hydroxyl group (right). The phenyl ring is attached to the central carbon via a single bond.
