

The image displays a 2D chemical structure plot of a complex organic molecule. The structure features a central benzene ring substituted with two amide groups and a side chain. The plot shows multiple overlapping lines in various colors (purple, blue, green, yellow, orange, red, brown, black) representing different conformations or components of the molecule. The x-axis is labeled with numerical values from 0 to 2500, and the y-axis is unlabeled. The molecule's structure includes a benzene ring, two amide groups, and a side chain with a terminal amide group.
