

The graph illustrates a chemical structure with the following components:

- Nodes:**
 - N 1:** A nitrogen atom located in the upper left quadrant.
 - N 2:** A nitrogen atom located in the lower left quadrant.
 - N 3:** A nitrogen atom located in the lower right quadrant.
 - O 1:** An oxygen atom located in the upper middle section.
 - O 2:** An oxygen atom located at the bottom center.
- Edges:** All connections between nodes are labeled "Single", indicating single bonds.
- Structure:** The molecule consists of several fused and connected rings. A five-membered ring is at the top left, connected to a six-membered ring below it. A central five-membered ring is connected to a six-membered ring on the right. The overall structure is a complex polycyclic system.
