

The chemical structure is a complex organic molecule. It features a central pyridine ring substituted with a fluorinated benzene ring at the 2-position, a methyl group at the 3-position, and a sulfonamide group at the 4-position. The sulfonamide group consists of a methanesulfonyl group (CH₃SO₂) attached to a methanamine group (CH₂NH₂). The molecule is colored with various colors: blue for the pyridine ring, green for the methyl group, red for the sulfonamide group, and yellow for the fluorinated benzene ring. The structure is shown in a 2D representation with a white background.
