

The chemical structure is a complex organic molecule. It features a central benzene ring substituted at the 1-position with a 4-methyl-5-oxo-1H-tetrazol-3-ylmethanol group and at the 4-position with a 2-(4-chlorophenyl)-1,3,4-oxadiazol-5-yl group. The 2-position of the central benzene ring is substituted with a trifluoromethyl group. The 4-chlorophenyl group is connected to the central benzene ring via a 1,3,4-oxadiazole ring. The 4-methyl-5-oxo-1H-tetrazol-3-ylmethanol group is connected to the central benzene ring via a methylene group. The 4-methyl-5-oxo-1H-tetrazol-3-ylmethanol group is a 1H-tetrazole ring with a methyl group at the 4-position, a carbonyl group at the 5-position, and a methylene group at the 3-position. The 2-(4-chlorophenyl)-1,3,4-oxadiazol-5-yl group is a 1,3,4-oxadiazole ring with a 4-chlorophenyl group at the 2-position and a methylene group at the 5-position. The 4-chlorophenyl group is a benzene ring with a chlorine atom at the 4-position. The trifluoromethyl group is a carbon atom bonded to three fluorine atoms.
