

The chemical structure shows a central five-membered ring with a nitrogen atom at the top position. The ring is substituted with a carbonyl group (C=O) at the 2-position, a methyl group (CH₃) at the 3-position, and an ethyl group (CH₂CH₃) at the 4-position. The 1-position of the ring is connected to a carbonyl group (C=O) which is further substituted with a methyl group (CH₃) and a hydrogen atom (H).
