

The diagram shows a biphenyl system with a carbonyl group and a double bond. The structure is composed of two benzene rings connected by a single bond. The left ring has a carbonyl group (C=O) attached to one of its carbons. The right ring has a double bond (C=C) attached to one of its carbons. The lines representing the bonds are colored in various colors: green, blue, yellow, red, and black. A circled '0' is located in the top left corner of the diagram.
