Course Description

Much current programming languages research is being done with the aid of automated proof assistants such as Coq, Isabelle/HOL, Twelf, Agda, NuPRL. This Independent Study will primarily focus on the Coq proof assistant and follow the “Software Foundations” course/text developed by Prof. Benjamin Pierce (UPenn), but will also briefly examine other tools and research literature describing the importance of formalized PL research.

Prerequisites

- CSCI-740 Programming Language Theory
- or permission of instructor

Topics

- Part I: Foundations
  - Functional programming
  - Constructive logic
  - Inductive definitions and proof techniques for informal and formal proof
  - The Coq proof assistant
• Part II: Basics
  – Operational semantics
  – Semantics of the imperative While language

• Part III: Type systems
  – Simply typed $\lambda$-calculus
  – Type safety
  – Subtyping
  – Dependently typed programming
